

Work Experience

Google

New Taipei City, Taiwan

Hardware Test Engineer, Pixel Lab, Pixel Test Engineering (PTE)

Sep 2024 – Present

● PTE Pixel Lab Laboratory Temperature & Humidity Monitor System Development

- Developed a temperature and humidity monitoring and logging system using an Arduino Uno board, DHT11 sensor, and Python serial communication, saving the PTE Pixel Lab NT\$600K+ by eliminating the need for purchasing additional commercial devices.

● 2025 PTE Testing Device Inventory Management System (IMS) Automation and Optimization

- Spearheaded the tool development by utilizing Google Apps Script to automate data aggregation from Seeker reports, delivering a prototype in 2 days and avoiding error-prone manual data entry.
- Successfully negotiated with an L5 leader to grant the 9-person project team access to the Seeker Report system, which greatly improved data integrity and enabled real-time, automated inventory updates.

● 2025 PTE Pixel Lab Annual Budget Management & Procurement and Supply Chain Consultant

- Coordinated procurement for 10+ test departments and established partnerships with 10+ key suppliers. Proactively built a standardized procurement management procedure and a budget-usage visualization tool to help optimize resource allocation, achieving a 99.3% budget utilization rate for 2025.

● 2025 PTE Management for 7 Pixel Test Laboratory Construction & Infrastructure Consultant

- Managed the new construction of seven Pixel Testing Engineering lab infrastructures by coordinating with project teams, the Gen team, and 7 labs' users to define project timelines and confirm all critical construction requirements (e.g., electricals and power, network and wifi, weight loading, fire safety facilities). Currently planning the 2026 TP1 7 labs testing equipment purchasing and relocation budget for August 2025.

Micron Technology

Taoyuan City, Taiwan

Intern engineer, ME WET Etching

July 2024 – Aug 2024

- Independently developed a web-based Optical Character Recognition (OCR) tool to accelerate the chamber data recording and avoid data transcription errors. Developed the tool using HTML, CSS, and JavaScript, and integrated the open-source Tesseract engine for accurate character recognition. [Project link](#)

Special Project

Microsoft 2024 Engage Student Program

New Taipei City, Taiwan

Hardware intern Engineer, Server Lab

Jun 2024 – Aug 2024

Built a real-time tool to convert speech to concise summaries, helping hearing-impaired people to highlight the key points during the conversation or meeting. Used Whisper.cpp, Google Gemini api, and Streamlit user interface to realize the tool. Was awarded the [Top Performance Award](#). [Project link](#)

NYCU AIOT High Education SPROUT Project

Hsinchu City, Taiwan

Scratch & Rabboni project developer

Sep 2020 – Dec 2020

Independently used the 3-axis accelerometer [Rabboni](#) and the Scratch program to develop an AIOT game project to call for attention to marine environmental protection. [Project link](#)

Education

National Yang Ming Chiao Tung University - [NYCU]

Hsinchu City, Taiwan

Bachelor degree of Engineering in Electrical Engineering

Sep 2019 – Jun 2024

Course Project

- **VLSI Lab:** Used Dsch 3 to create an inverter and 6 Transistor SRAM to export the verilog file, imported it into microwind 3.1, and drew the layout and output simulating waveform. [Project link](#)
- **Digital Circuit and System Design:** Used System Verilog and Verdi tools to design digital circuits such as comparators, FSMs, pipelines, and clock domain crossing. [Project link](#)
- **Radio Frequency Circuits Experiment:** Used AWR software in RF experiments to perform RF circuit simulation and welding implementation of LNA, Antenna, Mixer, Oscillator, LPF, etc [Project link](#)
- **Power Electronic Lab:** Used power meters, current and voltage probes, oscilloscopes, and LTSpice for LPF, ADC, DAC, etc. circuit simulation in electronic experiments [Project link](#)

Community Contribution

- **2024 Google Taiwan Forward Alliance Volunteer:** contributed to an open Source ERP Inventory Management System project, enabling Taiwan NGOs to efficiently distribute resources during disasters.
